Inter-Mountain Labs (IML) has been providing environmental services since 1979. We take pride in providing state-of-the-art accredited analytical chemistry and monitoring services that consistently satisfy critical regulatory review. IML is certified/accredited within numerous programs administered by the NELAC Institute, EPA, and A2LA and holds certifications in Wyoming, Nevada, Montana, Idaho, Oklahoma, South Dakota, North Dakota, Arizona, Texas, and Utah. Our scientists are trained in methodologies and quality assurance standards developed approved by EPA, A2LA, ISO, ASTM and multiple state agencies.

Micro Extraction of DRO EPA Method 3511

IML is excited to now offer EPA 3511 organic compounds in water by microextraction, specifically diesel range organics (DRO). IML is accredited by A2LA for Wyoming DEQ Storage Tank Program (STP).

Advantages of using EPA 3511 include:

- ◆ (3) 60 ml VOA vials instead of (1) 1 L glass amber bottle
- ◆ Smaller sample volumes
- ◆ Ideal for low flow locations
- ◆ Lower shipping costs
- ◆ Less solvent usage and waste generated
- ◆ Less time in the field to collect sample
- ◆ Reduced health and safety issues
